WHAT IS CLAIMED IS:

1. An electrical wiring method comprising the steps of:

installing an electrical box within a wall panel;

mounting a wiring panel within said electrical box so as to partition the interior of said electrical box into a user inaccessible wiring compartment and a user accessible module compartment;

routing a power cable into said electrical box;

wiring said power cable to a cable connector of said wiring panel within said wiring compartment;

electrically connecting said cable connector to a panel contact of said wiring panel;

inserting a module having a user operable electrical function into said module compartment;

electrically connecting said electrical function to a module contact;

shielding said panel contact with a panel fixture;

shielding said module contact with a module fixture;

meshing said module fixture and said panel fixture; and

pressing said module against said wiring panel so as to removably attach said module and said wiring panel and electrically connect said module contact with said panel contact.
